Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Previously Presented) A method for identifying various components of a system for building, management, and support purposes comprising the steps of:

(a) displaying a pictorial representation of a system including a plurality of components for building other components, managing the system and its components, and supporting other components of the system;

(b) presenting information relating to building the components of the system by indicia coding the components on the pictorial representation to indicate which components may be used to build other components;

(c) presenting information relating to managing the components of the system by indicia coding the components on the pictorial representation to indicate which components may be used to manage the system and its components; and

(d) presenting information relating to supporting the components of the system by indicia coding the components on the pictorial representation to indicate which components may be used to support other components of the system.

2. (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the building, management, and support information presented and conveyed relates to deliverable features in a business offering.

3. (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 2, wherein the features are listed in terms of the components to which the features relate.

4. (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 3, wherein the features included in the business offering are indicia coded.

2

5.   (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

6.   (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.

7.   (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

8.   (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the existing system is a web architecture framework.

9.   (Original) A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein a legend is presented which defines the indicia coding with respect to building, management, and support deliverables in a business offering.

10.   (Previously Presented) A computer program embodied on a computer readable medium for identifying various components of a system for building, management, and support purposes comprising:

3

(a) a code segment that displays a pictorial representation of a system including a plurality of components for building other components, managing the system and its components, and supporting other components of the system; and

(b) a code segment that presents information relating to building the components of the system by indicia coding the components on the pictorial representation to indicate which components of the system may be used to build other components of the system.

(c) a code segment that conveys information relating to managing the components of the system by indicia coding the components on the pictorial representation to indicate which components may be used to manage the system and its components; and

(d) a code segment that presents information relating to supporting the components the system by indicia coding the components on the pictorial representation to indicate which components may be used to support other components of the system.

11.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the building, management, and support information presented and conveyed relates to deliverable features in a business offering.

12.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 11, wherein the features are listed in terms of the components to which the features relate.

13.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 12, wherein the features included in the business offering are indicia coded.

14.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

15.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.

16.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

17.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the existing system is a web architecture framework.

18.   (Original) A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein a legend is presented which defines the indicia coding with respect to building, management, and support deliverables in a business offering.

19.   (Currently Amended) A system for identifying various components of a system for building, management, and support purposes comprising:

(a) logic processor ~~means~~ for displaying a pictorial representation of a system including a plurality of components, at least some of the components being usable to build other components of the system;

(b) logic processor ~~means~~ for presenting information relating to building the components of the existing system by indicia coding the components on the pictorial representation to indicate which components of the system may be used to build other components of the system.

20.   (Previously Presented) A method for identifying various components of a system for building, management, and support purposes comprising the steps of:

(a) displaying a pictorial representation of a system including a plurality of components, at least some of the components being usable to build other components of the system; and

(b) presenting information relating to building the components of the system by indicia coding the components on the pictorial representation to indicate which components of the system may be used to build other components of the system.

21.   (Previously Presented) A computer program embodied on a computer readable medium for identifying various components of a system for building, management, and support purposes comprising:

(a) a code segment that displays a pictorial representation of a system including a plurality of components for building other components, managing the system and its components, or supporting other components of the system; and

(b) a code segment that presents information relating to the components of the system by indicia coding the components on the pictorial representation to indicate at least one of the following:

which components of the system may be used to build other components of the system;

which components may be used to manage the system and its components; and

which components may be used to support other components of the system.

6
